FLUIDRA

THE PERFECT POOL EXPERIENCE

We are a leader in the global pool industry. Our portfolio includes some of the most trusted brands; we offer our customers an expansive array of products across both the residential and commercial pool and wellness markets; and we have strong geographical footprint with operations in over 47 countries.

Fluidra has over 7,000 employees and the combined resources to accelerate innovation in critical areas like energy-efficiency, robotics and the Internet of Things.

We are guided by clear values and come to work everyday with a simple and direct mission in mind: To create the perfect pool and wellness experience. By staying focused on this mission, we will create value for all our stakeholders, customers, pool owners, investors and employees.

INTEGRATED BUSINESS MODEL

R+D+i

Excellence in innovation with more than 200 engineers and 1,100 patents

Production

37 multi-technology and flexible factories in key countries

Logistics

Logistics operators to guarantee reliable and fast deliveries

Distribution

136 points of sale, providing assistance and training to professional customers in more than 45 countries

Engineering

Design and engineering of hydraulic projects

FLUIDRA COMMERCIAL PUMPS AND STRAINERS

Pump Performance with strainer

KIVU® PUMP

Description:
KIVU series commercial pumps are designed for large flows at high efficiency. Available in 7.5hp, 10hp and 15hp variations, the KIVU series are ideal for use in public pools, Olympic pools, water parks, aquariums and fish farms. Incorporating a thermoplastic housing, the KIVU pumps deliver high efficiency utilising a 4 pole, 1500rpm motor. Optional 25L pre-filter available which is easily fitted onsite.

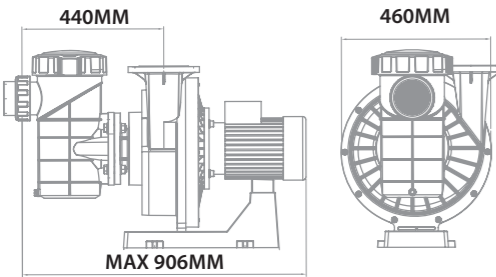

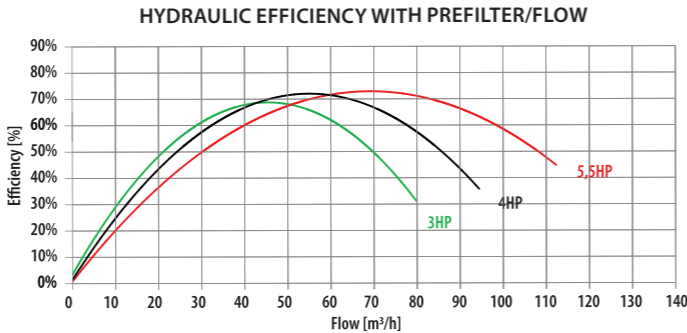

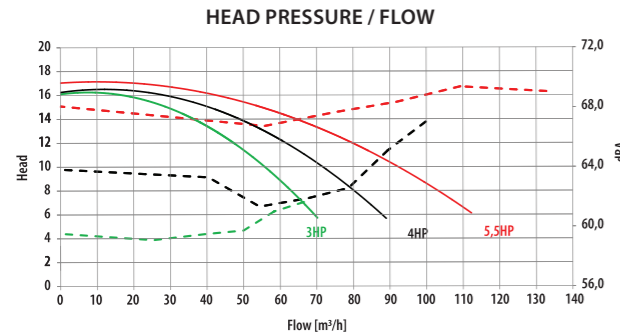

Model	Product Code	Volts	Input kw	Amps	Conn. Inlet	Conn. Outlet	Motor Speed RPM	Weight

XP HIGH PERFORMANCE PUMPS

Description:
Introducing the new XP pool pumps to our single speed range of pump products. Designed and manufactured in Australia, the XP pool pumps boast a robust and reliable construction complete with all 316 stainless steel hardware and durable plastics.

Offering a high flow, high pressure performance product, the XP pumps include a large capacity basket requiring less maintenance. Available with quick disconnect pipe connections, all XP pool pumps are designed to operate at low noise levels.

CHADSON INTERCEPTOR PREPUMP STRAINERS

Description:
INTERCEPTOR strainers are not traditional “bucket” type strainers. The straining mechanism of the INTERCEPTOR features a perforated W-shaped pleated screen. This unique screening mechanism provides high process efficiency and a far greater capability to retain solids.

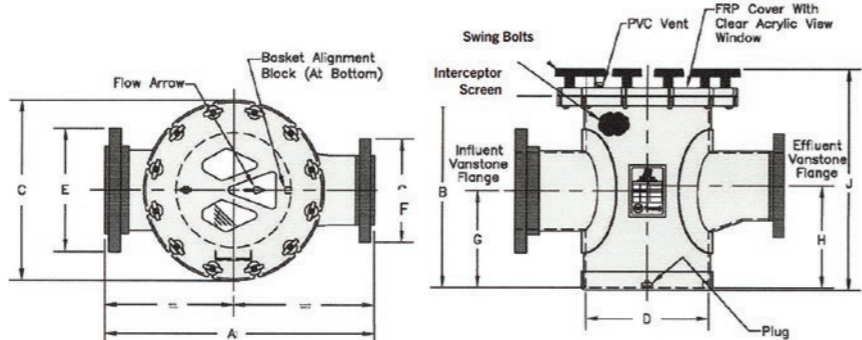

The INTERCEPTOR Prepump Strainer serves a vital function by preventing large solids from entering the workings of a motor driven pump set.

The INTERCEPTOR Strainer features non-metallic housing, manufactured from select FRP resins that will not rust or corrode, even in seawater and other corrosive environments. Standard working pressures are up to 100 kPa vacuum and 150 kPa pressure.

The INTERCEPTOR Stainer has Vanstone flanges, sized for common line sizes with a reduced outlet to suit comparable pump inlet connections.

The standard screen material is Grade 316L stainless steel with 3.25-mm diameter holes on a staggered 4.5-mm.

INTERCEPTOR Prepump Strainers have a clear viewing lid with easy access swing bolts. An air vent and vacuum gauge inclusions.

500-300/200	130	300	200	900	815	630	500	455	335	500	350	850
500-300/250	130	300	250	900	815	630	500	455	405	500	350	850

Nominal Flow is based upon a maximum incoming line velocity of < 2-m/sec - this may vary.
The reduced outlet size of the strainer matches the inlet size of ISO pumps capable of the strainers nominal flow.

FLUIDRA COMMERCIAL
FILTERS

CPC CHADSON PRE-COAT FILTERS

Description:
CPC filters are uniquely manufactured from FRP resin systems specifically selected for Australia's harsh conditions. The CPC Series offers all the functional benefits expected of a modern Regenerative Media Filter (RMF). Apart from reaching a far higher degree of clarification much quicker than other common forms of filtration, the CPC series also provides many environmental benefits.

With its unique particle selectivity, CPC filters can provide protection against modern chlorine resistant pathogens and organisms relating to swimmers' itch. The high process efficiency of CPC series will simplify pool water chemistry and reduce reliance upon harsh and objectional chemicals. Chemically complicated coagulants are not required for CPC filters.

CPC filters are extremely compact. Apart from taking up far less plant space, they can also operate with significantly smaller balance tanks and backwash tanks. All these factors help to contain construction costs.

CPC Filters are proudly designed & manufactured in Australia. Locally made filters provide many tangible benefits for pool Owners, all levels of government, the aquatics industry and potentially all Australians. Apart from anything else, buying Australian-Made makes good economic sense.

- Key Features:**
- Wide range of filter models to suit every conceivable pool size.
 - Suitable for fresh or saltwater swimming pools.
 - Can be comfortably operated using Diatomaceous Earth and Perlite.
 - Simple operation without the need for sensors, switches, computer control, and an air compressor.
 - Does not required any sophisticated automatic valves with complicated operating steps
 - Non-corrosive construction materials. No need to equipotential bond the filter vessel.
 - Large diameter, rigid candle cores - generously spaced to mitigate bridging and clogging.
 - Easy to service and replace "long life" Polypropylene filter socks.
 - Simple and easy to understand "single pass" precoating. Does not require the time and the extra plant space necessary for close loop precoating.
 - A dustless Wet-Vac precoating system that does not require the filter to be drained prior to precoating.
 - Simple to clean by conventional "reverse-flow" backwashing, with the option of a gravity drain-down.
 - The Media Release Accelerator (MRA) is a passive inclusion, which enhances cake release, without the fear of over-pressurizing the filter vessel.
 - The Lift'n'Swing davit provides quick access inside the filter - no need for a monorail & chain blocks.
 - Standard fitments include a vacuum breaker, auto air release, twin gauge panel, sight glass.

CHADSON GRANULAR FILTERS

Description:
Whilst most horizontal filters may seem to look the same, their cost of ownership will vary substantially according to a number of critical design issues. Such issues include process efficiency, the method of manufacture, and the choice of construction materials. Given a commercial pool filter is required to satisfy a very critical (public health) need, its initial purchase should not just be made on the basis of lowest apparent cost.

As many astute & discerning pool professionals have identified that (over a period of more than 30 years) CHADSON GRANULAR FILTERS will provide unique process benefits & undisputed value throughout its very considerable design life. These attributes are best reflected by the ability of CHADSON filters to provide longer filter runs (with less backwashing) and far less frequent replacement of the filtering media. In combination with a robust Australian-made FRP pressure vessel, many of these unique benefits can be attributed to the patented technology that is used within a CHADSON filter.

CHADSON's patented FloModuLata™ technology uniquely splits and distributes the water streams within the filter, during its filter & backwash cleaning process. By providing full lateral coverage and parallel (up & down) water streams, this unique processing, provides unparalleled efficiencies. These process efficiencies are widely known and accepted to provide longer filter runs, less frequent backwashing, lower wash water consumption, lower energy costs, and less frequent media and lateral replacements.

- Key Features:**
- Designed & manufactured in Australia, using locally available resins systems, which are especially formulated for Australia's harsh climatic conditions.
 - Chadson filters may be installed indoors or outdoors. Their non-corrosive construction materials are equally suitable for use with either fresh water or seawater.
 - Heavy duty, contact-moulded FRP pressure vessels; free of all the service issues that are occasionally associated with filament wound tanks. If a tank leak does occur, filament wound tanks are widely considered to be non-repairable.
 - Straight-through internal pipe headers (dn200) resulting in minimum head loss, low line- velocity, and reduced energy costs.
 - Multiple and precisely calibrated Soiled Water (SW) distribution nozzles which provide even flow, over ALL of the available filter area, not parts thereof.
 - Full-coverage & extensive underdrain system, using dn25 slotted laterals that are injection moulded from high impact, engineering plastics.
 - Full-size, internal-opening access hatch(s) providing convenient access, without the need to remove any face plumbing.
 - 100% of all filter production is hydrostatically pressure tested and certified as genuine pressure vessels.
 - Appropriate fittings & instrumentation (twin pressure gauges, Kinetic Air Vent/Vacuum breaker, screened drain cock, etc.,) supplied as standard fitments.

- Other Benefits & Options:**
- Free technical support and engineering advice that will guarantee a predictable result each and every time.
 - Every filter is supplied with comprehensive installation & operating Instructions that are designed to make your job easier. Our instructions contain valuable information, which is especially designed for commercial pools.
 - Being Australian-made, both standard and custom-made product can be readily supplied within acceptable delivery times.
 - Standard product details may be varied to include the supply of additional access hatches, different connection details, air-scouring, pulse backwashing, lifting lugs, high pressure ratings, face plumbing, manual & automatic backwashing valving.

Final Word:
If you are regularly backwashing your filter to maintain a flat and efficient sand bed, you are wasting valuable pool water and chemicals. If you need to regularly replace your filter media & laterals (every 5 years or less), your filter is not backwashing efficiently. With many CHADSON filters continuing to provide valuable service after 25 years of continuous service, the product's unique capability and its design life are matters of fact. The design life of a CHADSON filter is not reliant upon the interpolation of in-house cyclic pressure test; it's based on proven and extensive case history.

Unlike the many filter options that are available to you, CHADSON filters are tried & proven with the capability to provide very favourable life cycle costs. Good design is not about who can provide the lowest apparent purchase cost; it's more about satisfying an intended duty, with products that will provide process efficiencies, reliable performance, and predictable whole of life costs.

If issues do occur during the life of CHADSON product, it's important to note that we are here to support you. Not only will you feel good in supporting an accredited Australian made product, you will be rewarded with the performance, the low cost of ownership and the service that is often seems elusive with cheaper, imported product.

If you are considering a filter replacement, designing a new pool, or are just plain unhappy with the performance of your existing system, contact us today.

ATLAS FILTERS

Description:
Recognised For The Control Of Cryptosporidium & Guardia In Numerous Codes Of Practice

Fast And Effective Performance

It's not just about clear water anymore; swimming pool water needs to be totally healthy. As recognized in numerous standards & engineering references, Precoat filtration will provide positive protection against modern chlorine resistant pathogens like cryptosporidium & guardia. What's more, with it's patented regeneration cycle, Atlas® filters will provide long and effective filter cycles. When you take into consideration the reduced wash water consumption, the reduction of plant space, and the elimination of chemically complicated flocculants, it's easy to see why there are a growing number of commercial pools using Atlas® Precoat filters.

Atlas® filters are internationally known & recognized. They have been used on some of the largest and most prestigious swimming pools around the world. They are also supplied with such coveted awards as a SABS Design Award, the GQM Quality Award and the 9th International Technology Trophy.

How It Works:
The various PCT Models in the Atlas® filter range are differentiated by the amount of filter area that is provided within a given tank diameter. When the prescribed amount of filter media is added to the incoming water flow, it forms a thin coating on the outside of the cloth covered filter elements (candles). This "filter cake" forms a microscopic sieve that filters far finer than the cloth covering of the filter candles. As the Precoat filter process does its job of collecting pollutants, collected matter will progressively block the filter cake.

Atlas® filters are not conventional static cake type filters; they have a unique regeneration cycle that optimizes the use of a replaceable filter media. Regeneration occurs automatically. Each time the filter cycle is interrupted, the trapped dirt and filter media will automatically settle to the bottom of the filter tank. When the filter is re-started, the incoming water flow will automatically intermix and redistribute the selected filter media back on to the filter candles. This restores the porosity of the filter cake and returns the filter back to its maximum clean water flow.

The Atlas® Regenerative Precoat filters provides the pool Operator with many unique benefits - low wash water consumption, extremely compact filter vessels, & Ultra Fine Filtration (UFF) that will physically remove microscopic bacteria, chlorine resistant pathogens, & other solids.

VDF VERTICAL DUAL MEDIA FILTERS

- Key Features:**
- Non-corrosive & durable construction materials - without a reliance upon protective coating/paint systems. Cathodic protection is also not required
 - Transportable & lightweight construction - up to one sixth the weight of a comparable steel vessel
 - Short term savings through easier installation & long term benefits due to vastly reduced maintenance
 - Effective “deep bed” filtration with media volumes & bed compositions that are designed for demanding & critical applications
 - Being Australian-made, both standard and custom-made product can be supplied within a manageable & agreed delivery time
 - Filter internals designed to accommodate aggressive backwash rates of up to 42m3/hr/m2 without any excessive pressure/head loss
 - Models with patented FloModuLata™ internals (No PP743517) to control & optimize the waterstreams in both the filter and the backwash operation.

- Optional Features:**
- Multiple & different access hatches, additional nozzles, lifting lugs, endoscope connection, etc.
 - Choice of backwash method single lever, valve matrix, or shunt - all of which can be automated
 - Air assisted backwash methods (unique double-walled air scour internals)
 - Flat filter floor obviating the need for clean water plenums and known pressure differential problems
 - High than standard pressure ratings - external & dependent certification to meet specific standards.

Final Word:

Conventional filter materials like protected carbon steel (and even concrete) are not immune from corrosion. Fiber Reinforced Plastic (FRP) on the other hand is a totally inert engineering material that is not easily abraded by regular and abrasive backwashes. Improper or poor filter selection can result in high maintenance and expensive replacement costs. Quite apart from any cost implications, corrosion & other problems can also be critical in terms of the risks and the inconvenience that could be caused by a major disruption to plant &/or services.

Chadson by Fluidra are accredited Australian manufactures of FRP pressure filters with more than 30 years of applied experience. With over 2,000 assorted FRP pressure filters to their manufacturing credit, you can be assured that Chadson by Fluidra filters are “tried & proven”. It’s simply not worth it. With the proven and dependable performance of CHADSON GRANULAR FILTERS, buying Australian-made makes good economic sense - not only for your project... But for the whole country.

BERLIN FILTERS WITH OC-1 FILTRATION MEDIA

Description:
Fibreglass wound, with a dust-repellent coating, 400mm diameter lid fixed with S/S bolts. Complete with pressure gauge, manual air vent and water purge valves. Maximum operating pressure 250 kPa (2.5 bar). Test pressure: 375 kPa.
All Berlin OC-1 Filters are supplied pre-loaded with OC-1 Filtration media.

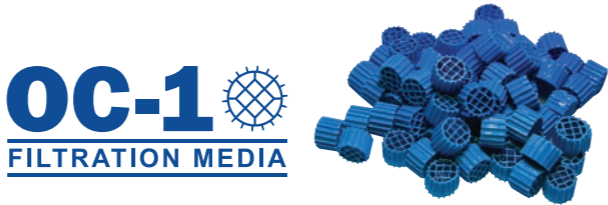

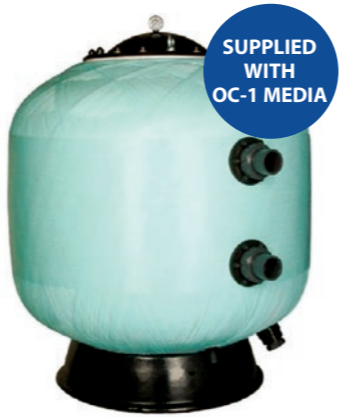

OC-1 Filtration Media - The future of swimming pool filtration
OC-1 is an open cell media that has very low resistance to allow more water to be turned over in a pool. It has a huge capacity to store debris and matches the filtration quality of sand and glass filter media. However unlike all other media, the flow rate will not slow down once a small amount of dirt is caught, therefore optimising your filtration system and resulting in healthier water for you and your clients.

Light Weight - Unlike sand, gravel and glass, OC-1 is incredibly lightweight so is easy to handle and transport.

Save Power - It can reduce variable speed pumps by around 20% to achieve the same water flow through the filter without compromise, producing impressive energy savings.

Save Water - The huge debris retention results in less back washing frequency. On new installations a smaller pump can be specified to produce the same flow – saving running costs and initial outlay.

Save Time - Due to its constant flow rate and huge debris capacity, OC-1 only needs to be backwashed once every 3 months.

COMMERCIAL POOLS

OC-1 media really excels in the commercial sector.

Potential savings in running costs come from the ability to reduce pumps speed or use smaller pumps, reduced backwashing and water consumption.

HIGH QUALITY FILTRATION

The debris capacity of OC-1 is more than 20 times that of sand or glass.

OC-1 removes 81% of 10 micron particles in a single pass and can even remove particles as small as 1 micron without flocculation or coagulation.

NEW INSTALLATIONS

The OC-1 filter range covers all applications from small domestic to the largest commercial installations.

EXISTING INSTALLATIONS

It is simple to convert an existing sand filter for use with OC-1.

For retrofitting to existing installations or for more information on OC-1, contact your Fluidra Commercial team member.

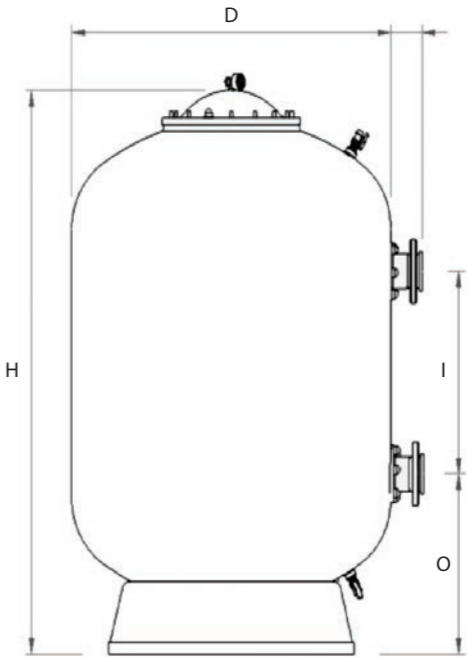

PRAGA FILTERS

Description:
Bobbin wound fibreglass commercial filters with diameters from 1050mm to 3000mm. Filter lid is 400mm diameter with air purge valve, 20mm slotted laterals in parallel layout, sand dump port, water drain valve, pressure gauge panel. Maximum operating pressure 250 kPa and 400 kPa models available.

Options:
Vinylester resin construction, multiport valve. Nozzle Collector Plate 0.5mm. See below.

COMMERCIAL POOLS

OC-1 media really excels in the commercial sector.

Potential savings in running costs come from the ability to reduce pumps speed or use smaller pumps, reduced backwashing and water consumption.

HIGH QUALITY FILTRATION

The debris capacity of **OC-1** is more than 20 times that of sand or glass.

OC-1 removes 81% of 10 micron particles in a single pass and can even remove particles as small as 1 micron without flocculation or coagulation.

NEW INSTALLATIONS

The **OC-1** filter range covers all applications from small domestic to the largest commercial installations.

EXISTING INSTALLATIONS

It is simple to convert an existing sand filter for use with **OC-1**.

For retrofitting to existing installations or for more information on OC-1, contact your Fluidra Commercial team member.

OSLO FILTERS

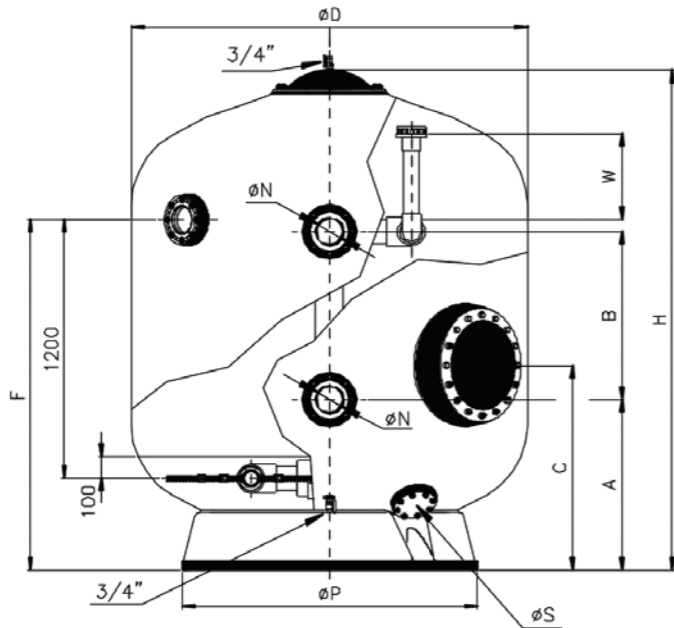

Description:
Vertical high performance bobbin wound fibreglass filter. Equipped with pressure gauge, manual air vent, water purge and laterals with 0.3mm slots.

Options:
Nozzle collector plate with 0.5mm slots. Side manhole. Additional sightglass. Vinylester internal lining. Models available for maximum working pressure 250 kPa (2.5 bar) and 400 kPa (4.0 bar).

Warranty:
Refer to www.astralpool.com.au for all warranty details.

Description:

Fiberglass horizontal commercial sand filters 1050-2500mm diameter. Maximum operating temperature 50°C. Tested at 1.5 times maximum operating pressure. Equipped with pressure gauge panel, manual air, water purge and 400mm loading access. Internal components and pipe in PVC. Laterals 0.3 mm slots in PP. Bolts, nuts and washers in AISI-316. EPDM seals and gaskets.

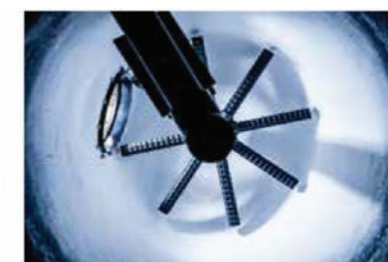

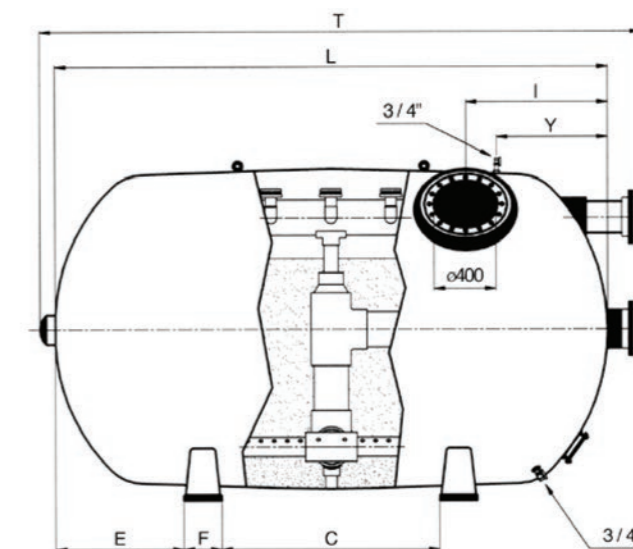

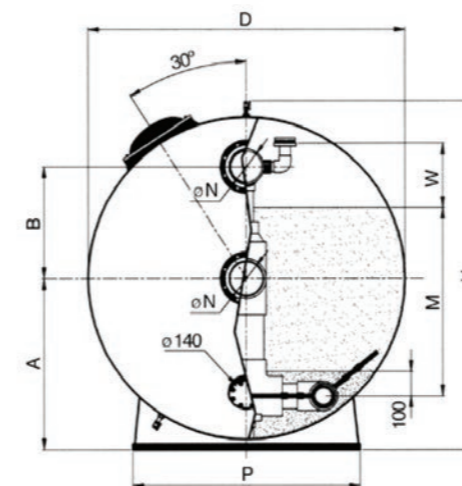

Options:

Options for side opening placement. Vinylester internal lining for ozone treated pools. Sightglass 135mm and 400mm side manhole.

FLUIDRA COMMERCIAL DISINFECTION

EASY SALT NEXT VC

Description:
AUTO-CLEANING saline electrolysis system for residential and public use pool applications of up to 190g chlorine / hour. Easy salt is a compact device with a competitive cost. To control more than one unit for the same pool, external control AP PR-200 is required

GUARDIAN CONTROLLERS

Description:
The new Guardian Pool combines traditional control and dosing elements with full digital value control, facilitating the management of the water parameters and records in order to analyse or detect problems. To manage the data, Guardian Pool has an internal 4 MB memory, allowing us to store up to 16,000 records that can be consulted in data or graph format. The data can be viewed on the 7" backlit high-resolution touch screen, downloaded through the USB port, that can also be used to update the firmware, via WiFi to control the equipment from any mobile device, Tablet or PC, or through the Fluidra Connect platform. Guardian Pool is known for its high-performance control and regulation of chemical products used in public and private swimming pools.

ACQUA DOS PUMPS

Description:
The Acqua Dos series digital dosing pump with pH/Redox control meter built in and adds to the functionality the capacity to dialogue with a PLC using the Modbus protocol. The dosing pump is supplied without measuring probes. With only 3 sizes, is possible to cover a wide range of performances, having a flow rate range from 4 to 110 l/h and a back pressure up to 16 bar. The power supply is 100÷240 Vac – 50/60 Hz therefore the same pump can operate with different supply voltage. The pump head is in PVDF, therefore high chemical compatibility with several liquids. All Acqua Dos series are equipped with a manually priming pump for the start up. The pump is furnished with a complete standard installation kit, which includes: PVDF foot filter and injection valve, PVC suction tube, PE delivery tube.

COMMERCIAL HEATERS

ASTRALPOOL COMMERCIAL HEAT PUMPS

FOR OUTDOOR INSTALLATION ONLY

Description:
Heat Pump suitable for commercial pools in sizes ranging in 38kw to 190kw Titanium heat exchanger, powder coated case. Flow rate from 283 lpm to 1000 lpm.

ASTRALPOOL COMMERCIAL INVERTER HEAT PUMPS

Description:
Astralpool's AHP inverter series heat pumps have market leading, full inverter technology along with high-quality compressors providing COP's of up to 16.1 Soft start technology limits sudden fluctuations in power supply and the DC driven inverter fans with a special blade design reduces noise levels up to 20% over standard models.

FLUIDRA COMMERCIAL CLEANERS

TRX 8500 IQ – VORTRAX COMMERCIAL CLEANER

Description:
Zodiac's® TRX 8500 iQ and TRX 8700 iQ models in the VORTRAX range have powerful cyclonic suction that efficiently sucks up all debris. Dual-stage level filtration from 60 to 150 microns enables debris of all sizes to be collected, which doubles the filtration surface area, and in turn delays the time before the filter clogs up.

Model	Product Code	Pool Length	Cable Length
TRX 8500 IQ	WR000602	20M	25M

TRX 8700 IQ – VORTRAX COMMERCIAL CLEANER

Description:

MANUAL POOL CLEANING - TELEPOLES

Description:
Range of telescopic handles, adaptable for use with manual pool cleaning equipment such as vacuum heads, leaf skimmers and brushes. Manufactured in aluminum with wing-nut fixing, these poles are reinforced for use in public pool facilities.

Model	Product Code
TELEPOLE 2.5M – 5.0M	01361
TELEPOLE 3.75M – 7.5M	15838
TELEPOLE 5.0M – 10.0M	01362
TELEPOLE 6.5M – 13.0M	01363

MANUAL POOL CLEANING – VACUUM HEADS

Description:
Manual vacuum heads designed for use in public pool environments. Manufactured from anodized aluminium and chrome-plated brass, can be connected to telepoles via wingnut fixing (ordered seperately).

Model	Product Code
VACUUM HEAD 450MM WIDTH	01358
VACUUM HEAD 800MM WIDTH	16601

PORTABLE VACUUM TROLLEY

Description:
This portable swimming pool vacuum cleaning system has been designed for ease of use and manoeuvrability whilst at the same time offering exceptional performance.

- Features include:**
- Heavy-duty trolley with bearing wheels, with wide pneumatic tyres for easy manoeuvrability up and down steps and through grassed areas.
 - 100 sq ft. cartridge filter
 - AstralPool CTX360 high performance pump
 - Solid aluminum plate support bracket and clamp which ensures that cartridge filter is held securely in place, but can also be easily removed if required.
 - Single-phase on/off switch
 - 20-metre heavy-duty cable with circuit breaker plug.
 - 40mm cam lock (Optional 50mm) fitting to the pump suction port etc
 - Cam locks fitting on the filter discharge with 3 meters of discharge hose.
 - Bypass valve with camlock to allow vacuuming direct to waste (bypass the filter)
 - The vacuum trolley is pre plumbed ready for immediate use

*Suction Hose, Extension Pole and Vacuum Head not included

Model	Product Code
PORTABLE VACUUM TROLLEY SUIT 40MM SUCTION HOSE	75805000
PORTABLE VACUUM TROLLEY SUIT 50MM SUCTION HOSE	75805050

FLUIDRA COMMERCIAL BLOWERS

COMMERCIAL BLOWERS

Description:
Air blowers designed to shake the filtration bed during the backwashing process or to supply air wherever required.

The blower housing and the impeller are made of a light Aluminium alloy, whereas the shaft is made of S.S. on which the impeller is mounted and dynamically balanced. The 100-120/200-240 V single phase and the 200-240/280-440 V three phase motors at 50/60 Hz for non-stop operation, are manufactured according to the IEC Standards and come with an IP 54 outer protection and an F Class insulation. The blowers can be installed both horizontally and vertically, and as there is no contact between the fixed and movable blower parts, it does not require any lubrication nor maintenance, neither is there any wear and tear.

Ordering:
Please contact your AstralPool representative for further details and pricing.

LANE LINES

Description:
Our unique, patented design is proven to reduce wave action and creates a multidimensional barrier against waves by dispersing them along the lane line, through each individual freely spinning lane disc, and then down into the water. Anti Wave lane lines meet a wide range of needs from recreational lap pools to international aquatic facilities for elite competition. Our MAXI, MYTI and MIDI model racing lanes represent the cutting edge of lane design and wave dissipation, and comply with all FINA, LEN and equivalent regulations.

Ordering:
Please specify product number when ordering.
Note: SuperTensioner, Long Clamp with S-Hook or Snap Hook must be ordered separately
Key to order discs and floats:
X = colour, Example 2-61-103 = 65mm Yellow MINI disc

LONG REACH BLOCK TURN PANELS - 2M	LR850-2MTURNPANEL
LONG REACH BLOCK TURN PANELS - 2.4M	LR850-2.4MTURNPANEL

750 BLOCK

Description:
Competition starting block suitable for both training and competition
Complies with World Aquatics design requirements and includes adjustable trackstart
No earthing required for installation due to composite material construction (including backstroke handle)
Compact base allows for installation on pool decks where space is limited

Ordering:
Please specify product number when ordering.

Model	Product Code
ANTI WAVE SUPERBLOCK 750 WITH TRACK START	25-61-071S

SR250 SHORT REACH STARTING BLOCKS

Description:
Short reach starting blocks are designed with a 240mm setback and 350mm height, allowing them to be installed on pool with narrow raised end walls. Available with 3 platform configurations including an elite competition platform with track start adjustable to 5 positions. The track start wedge can tuck away at the rear of the footboard.

Ordering:
Please specify product number when ordering.

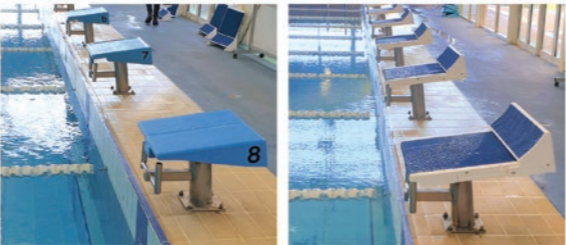

Model	Product Code

PRO 1080 GOAL

Description:
The Anti Wave Pro Floating Goal was first introduced at the 1972 Olympic Games in Munich, Germany. This premium water polo goal features a powder coated aluminum frame, reinforced with fiberglass, and a tough, polypropylene net that is knotted at every intersection. The EVA foam floats offer superior, even flotation for maximum goal stability. Small deck wheels allow the goal to be moved easily along the pool deck.

Ordering:
Please specify product number when ordering.

Model	Product Code
ANTI WAVE PRO 1080 GOAL	14-61-1080

SENIOR 1080 FOLDING GOAL

Description:
The Anti Wave Senior Folding Pro Goal 1080 is a full-sized FINA Approved competition Polo goal, dimensionally the same as the Anti Pro Goal 1080, with the added benefit that it folds flat for easy pool side storage and movement. Easy to erect and put down – to fold just pull the Rear Arms out of their sockets and fold down the Front Frame for storage.

Ordering:
Please specify product number when ordering.

Model	Product Code
ANTI WAVE SENIOR 1080 GOAL	14-61-1080F

PRO 750 GOAL

Description:
This premium Anti Wave water polo goal features a powder coated aluminum frame, reinforced with fiberglass, and a tough, polypropylene net that is knotted at every intersection. The EVA foam floats offer superior, even flotation for maximum goal stability. Small deck wheels allow the goal to be moved easily along the pool deck.

Ordering:
Please specify product number when ordering.

ANTI WAVE PRO 750 GOAL	14-61-0126

CLUB FOLDING GOAL

Description:
The Anti Wave Club Folding Goal conveniently folds flat for quick and simple storage. The net is made from tough polypropylene cord, and is knotted at every intersection and the patented, open-corner net configuration reduces ball rebound.

Ordering:
Please specify product number when ordering.

Model	Product Code
ANTI WAVE CLUB FOLDING GOAL	14-61-0128

FLIPPA FOLDING GOAL

Description:
The Anti Wave Flippa Folding Goal conveniently folds flat for quick and simple storage. The net is made from tough polypropylene cord, and is knotted at every intersection. The patented, open-corner net configuration reduces ball rebound.

Ordering:
Please specify product number when ordering.

Model	Product Code
ANTI WAVE CLUB FOLDING GOAL	14-61-0128

CLUB WALL GOAL

Description:
The Anti Wave Club Wall Goal anchors directly into the pool deck or bulkhead via two rear support arms that can be fully adjusted both vertically and horizontally to fit existing deck anchors. The polypropylene net is knotted at every intersection, and completely covers the back and sides of the goal. The back drape net is made of heavy-duty canvas, and features a weighted bottom strip for even hanging.

Ordering:
Please specify product number when ordering.

Model	Product Code
ANTI WAVE CLUB FOLDING GOAL	14-61-0128

GLOBAL GOALS

Description:
Australian made, fabricated from custom marine grade powder coated Aluminium with HD Marine Nylon & SS316 fittings. Durable, light weight, heavy duty design and construction allowing safe and easy 1 or 2 person pool deck movement. Easily foldable for compact and safe poolside storage, Includes Long-Life HD polypropylene cord net. Soft Durable Pool Edge bumpers on rear of frame prevent damage to pool edge and tiles. Durable oversized HD PE Flotation elements ensure stability during use, foam elements rest on the pool concourse, preventing damage to pool edge and tiles. Open corner net configuration reduces ball rebound

Custom Designs Available

SENTRY® LIFEGUARD CHAIR

- Description:**
- Constructed from HDPE for strength and low maintenance
 - Marine grade, 316 stainless steel hardware
 - 76cm chair comes with brackets for anchoring to pool deck, and 107cm chair drilled to accept anchors (recommended, but not provided)
 - Textured treads for slip resistant surface
 - Cup & umbrella holder
 - Easy to assemble

Ordering:
Please specify product number when ordering.

FLUIDRA COMMERCIAL
COVERS & ROLLERS

Sunbather®

THERMAL COVERS

THERMAL - A SIMPLY BRILLIANT IDEA.
Sunbather Thermal Covers are UV stabilised, closed cell, cross-linked foam, flame-bonded between layers of polyethylene fabric. Simple and brilliant!

They lock in heat overnight and reduce evaporation by 95% and pay for themselves in a couple of years.

LOSING HEAT OVERNIGHT IS EXPENSIVE.
Fuel heaters are expensive to run but having a cold pool at the start of every day will also cost you money. The answer is simple. Cover your pool with a Sunbather Thermal Pool Cover when it's not in use and you'll slash your annual heating costs dramatically.

WATER EVAPORATION COSTS THE ENVIRONMENT AND COSTS YOU MONEY.
Water loss is an environmental and a financial loss. The table shows, water loss on uncovered and unheated pools is almost twice their water volume every year! Heating doubles that loss. In the hotter regions it's even more. A Sunbather pool cover has the potential to save up to 95% of water evaporation. On a 500sqm unheated Sydney commercial pool that's over half a million litres.

	ANNUAL EVAPORATION	WATER LOST 30m POOLS	WATER LOSS 40m POOLS	WATER LOSS 500m² POOLS
SYDNEY	1400 MM	42,000 LTRS	56,000 LTRS	700,000 LTRS
MELBOURNE	1400 MM	42,000 LTRS	56,000 LTRS	700,000 LTRS
BRISBANE	1500 MM	45,000 LTRS	60,000 LTRS	750,000 LTRS
PERTH	1800 MM	54,000 LTRS	72,000 LTRS	900,000 LTRS
ADELAIDE	1900 MM	57,000 LTRS	76,000 LTRS	950,000 LTRS
HOBART	1100 MM	33,000 LTRS	44,000 LTRS	550,000 LTRS
DARWIN	2200 MM	66,000 LTRS	88,000 LTRS	1,100,000 LTRS

Source: http://www.bom.gov.au/cgi-bin/climate/cgi_bin_scripts/evaporation.cgi Figures will vary with climatic conditions.

IT PAYS FOR ITSELF!
Annual savings on fuel bills with a Sunbather Thermal Pool Cover usually recoup the entire system cost in just one or two years! After that it's all extra profit.

ONLY THE SUPER TOUGH SURVIVE.
Sunbather pioneered and dominates commercial thermal pool covers by designing covers that are clever and tough.

Outdoor covers have wind-edging. Indoor pools get double mesh edging. Fixtures are stainless steel. Sunbather innovations are driven by the need to perform while coping with a commercial pool environment.

Ordering:
Please contact your Fluidra Commercial sales representative to discuss.

ROLLER SYSTEMS

ROLLERS FOR EVERY TASK.

From basic hand-operated rollers to their state-of-the-art motorised units, every Sunbather roller is made to the same exacting quality and performance standards.

Every pool is unique and Sunbather's ability to create bespoke solutions for every site makes them the leader in high tech thermal pool cover and roller systems.

Swimming pool chemicals, salt, and temperatures are a harsh environment for rollers which is why a combination of stainless steel, acetal, and nylon ensure the industry leading 200S roller will stand the test of time.

Roller shafts are anodised aluminium. The housing is of robust stainless steel. Bearing and locking bolts are acetal. Wheels are made of the toughest nylon with stainless steel swivel castors and brakes.

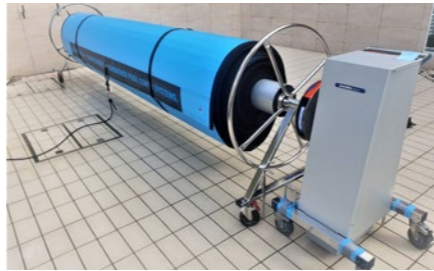

The unique Drop Bolt system ensures correct, stable and repeatable positioning for ease and safety.

UNDERSEAT ROLLER

ROLLER WITH STARTING BLOCK EXTENSION

AQUAVALET

THE FUTURE IS MOTOR-DRIVEN.

Given the impact of OH&S and the size of modern pool covers, the future for commercial pool rollers is motor-driven.

Motors can be hidden inside the roller shaft itself.

They can be wall-mounted, side-mounted, end mounted, installed under benches or even hung from the ceiling.

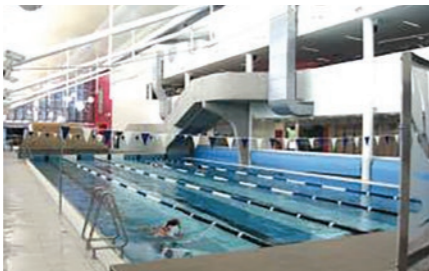

They can be remote controlled and key-lockable.

They can straddle starting blocks; cope with lane ropes; cope with pools 50m and longer and even cope with negative edge and wet deck pools.

In essence they are practical, out of the way, simple to use and cost effective with energy and OH&S savings

MOTORISED WALL-MOUNTED ROLLERS

SIDE DELIVERY ROLLERS

HIDDEN COVERS

MOTORISED IN-PIT ROLLER IS OUT OF SIGHT.

Sunbather's Motorised In-Pit Roller Cover System was the 2014 Pool Product of the Year because it solves a key problem, especially on commercial pools.

When the pool is in use the roller and the pool cover is hidden under a hinged lid. With the lid closed and sitting flat with the pool deck, both roller and cover are out of sight and out of the way.

Then, when the pool closes, the lid is opened and the thermal cover is pulled out to cover the pool, keeping it warm and clean.

Right now, Sunbather's Motorised In-Pit Roller is the hottest thing in the commercial pool heating world

AQUA VALET = OH&S PROTECTION.

The Aqua Valet removes and deploys large pool covers in minutes. Driving a standard roller or the Motorised In-Pit Roller system it's the perfect solution for today's OH&S considerations.

Stainless steel and anodised aluminium construction, it suits pool lengths up to & over 50m with variable speed operation. For added safety it has a circuit breaker, spring loaded switches, grab handles, wheel brakes, drop bolts, soft start and can be customised for use on remote controlled motorised rollers.

It's power comes from a rechargeable Long Life 24v DC, so no long power cables and no battery maintenance.

THE KEY TO THE PERFECT COMMERCIAL POOL COVER.

The Sunbather Security Cover is automatic. To open the pool just turn the key and the cover quietly retracts. Turn it again and the cover glides out to seal the pool.

It's called a Security Cover because the pool is key locked and it's rigid foam-filled CVX slats are strong enough to support small children and pets.

Those interlocking slats reduce water loss through evaporation and, on indoor pools, damaging condensation. Outdoors, they also keep leaves, debris, birds and animals out of the pool.

Like all Sunbather thermal covers, the CVX Security Cover locks in heat overnight to save energy.

FLUIDRA COMMERCIAL WELLNESS EQUIPMENT

POOL SURROUND WATER JET

Description:
Water jets for the pool surround, featuring a swan-neck shaped cylindrical section. These features provide a high pressure jet of water for a relaxing massage. Manufactured from polished AISI-316 stainless steel. An anchor plate is required for installation (ordered seperately) and can be used with 4 interchangeable nozzles (also ordered seperately)

Ordering:
Please specify product number when ordering.

Model	Product Code
POOL SURROUND WATER JET	34039
ANCHOR PLATE TO SUIT	34040
UNIFORM PRESSURE NOZZLE	34041
DOUBLE PRESSURE NOZZLE	34042
DIFFUSER SPRAY NOZZLE	40433
FAN SPRAY NOZZLE	34044

POOL SURROUND CASCADE

Description:
A cascade for the pool surround, designed to create an intense yet deeply relaxing curtain of water. Manufactured from polished AISI-316 stainless steel, an anchor plate is required for installation (ordered seperately).

Ordering:
Please specify product number when ordering.

Model	Product Code
POOL SURROUND CASCADE	34032
ANCHOR PLATE TO SUIT	34033

WALL MOUNTED WATER JET

Description:
A wall mounted water jet featuring a cylindrical cross section. Designed to produce multiple high pressure water jets for a back and shoulder massage with medium intensity. Manufactured from polished AISI-316 stainless steel, an anchor plate is required for installation (ordered seperately).

Ordering:
Please specify product number when ordering.

Model	Product Code
WALL MOUNTED WATER JET	34464
ANCHOR PLATE TO SUIT	19983

MASSAGE NOZZLE KIT

Description:
A set of 3 massage effect nozzles, using a combination of water and air to stimulate calves, thighs and hips. These units are installed in a vertical arrangement on the wall of the pool at a height of 300mm, 600mm and 900mm from the flow. Also requiring a hand rail (ordered seperately) which can be mounted on the wall or the pool deck. The rail serves two purposes, allowing the user a place to hold but also provides an air intake for the nozzles via a venturi system. Manufactured from polished AISI-316 stainless steel.

Ordering:
Please specify product number when ordering.

Model	Product Code
MASSAGE NOZZLE KIT - CONCRETE	34049
MASSAGE NOZZLE KIT - LINER	40981
HAND RAIL (SUITS BOTH)	34050

NECK MASSAGE

Description:
A new hydro-leisure element for a relaxing neck massage. The design allows for it surround the entire neck area for an effective and enjoyable massage. Manufactured from polished AISI-316 stainless steel, it incorporates 6 adjustable mini jet streams.

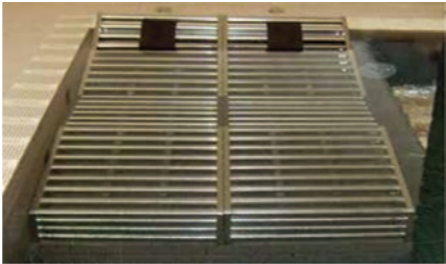

Ordering:
Please specify product number when ordering.

Model	Product Code
NECK MASSAGE	60792

HYDROMASSAGE TUBULAR BEDS

Description:
An elegant, modern design out of tubular steel. A single bed to which additional units can be added to achieve desired width. Requires blower to deliver air flow of 80 m3/hr @ 100 mbar. Manufactured from polished AISI-316 stainless steel, optional side covers are available (ordered seperately).

Ordering:
Please specify product number when ordering.

Model	Product Code
HYDROMASSAGE TUBULAR BED	58812

HYDROMASSAGE LOUNGER

Description:
An elegant, modern design to provide maximum comfort. Air is injected through the central base of the lounge to provide a muscle relaxing massage. Requires blower to deliver air flow of 150 m3/hr @ 100 mbar. Manufactured from polished AISI-316 stainless steel, a central column is required as part of the installation (ordered seperately).

Ordering:
Please specify product number when ordering.

Model	Product Code
HYDROMASSAGE LOUNGE 1700MM	31998
LOUNGER COLUMN 1700MM	31996
HYDROMASSAGE LOUNGE 1450MM	32071
LOUNGER COLUMN 1450MM	32070

AIR BEDS

Description:
Ergonomically designed massage unit with air jets in the back, lumbar and leg regions. Requires blower to deliver air flow of 80 m3/hr @ 100 mbar. Manufactured from polished AISI-316 stainless steel, models to suit both concrete and liner installation.

Ordering:
Please specify product number when ordering.

Model	Product Code

SKYPOOL SOLUTIONS

SkyPool, the solution for prefabricated hot-dipped galvanized and stainless steel competition panel pools, using the safest, most efficient technology available.

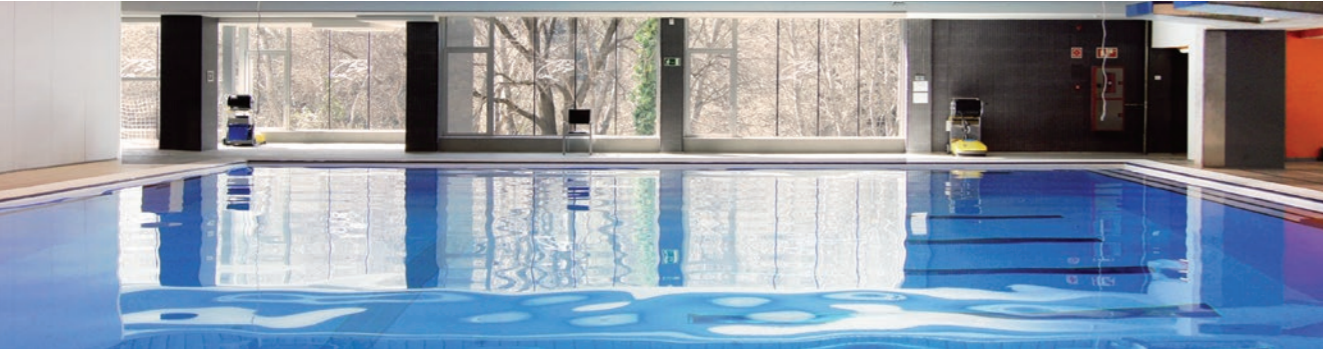

Specializing in delivering end-to-end competition pool projects, the ASTRALPOOL brand, which belongs to the Fluidra group, manufactures structures that adapt to existing, fixed and potential infrastructures.

KNOW-HOW

AstralPool, with more than 50 years of experience in the world of pools, has become a leader in prefabricated galvanized steel panel pools. Our flexibility and drive, in addition to the way we adapt to the requirements and regulations of each market have led us to build pools in more than 60 countries, which has made us one of the companies with the greatest international outreach in the sector.

This great diversity in our range of hot-dipped galvanized and stainless steel pools not only makes us experts, but also pioneers in the development of solutions and improved production methods in our constant search for innovative technologies and concepts, all of which enables us to stay ahead of market requirements. Our sole goal: your satisfaction.

SKYPOOL IS THE BEST CHOICE

WATERTIGHTNESS

A final lining of a reinforced PVC that is extremely flexible and resistant ensures that pool shells are completely watertight.

LOW MAINTENANCE COSTS

As pool components are readily accessible, any problems are pinpointed faster, so repair and maintenance work is easier and costs less.

PRECISION

Unsurpassed precision in the manufacture and construction of pools ensures extremely accurate tolerances are attained, impossible to obtain in traditional systems. Our pools are homologated for use in official competitions in line with FINA standards.

SUSTAINABLE

All components can be recycled, are noncontaminating and are manufactured using processes with a low environmental impact.

COST

As no complex infrastructure has to be built, a high performance pool can be obtained at a lower cost.

SKYPOOL THE BEST PERFORMANCE

TECHNOLOGY

Thanks to the technology used in the construction of SkyPool panel pools, their precision and accuracy comply with FINA regulations.

We have leveling and dimensional tolerance adjustment systems, in addition to materials resistant to subsidence and expansion.

A SkyPool is the result of experience and the use of cutting-edge technologies for the design, manufacture and installation of our pools.

READILY ACCESSIBLE POOLS THAT ARE EASY TO RUN

A typical pool installation can be checked from a technical gallery that provides access to the back of the panels for inspection, maintenance and repair work. This means that pools do not have to be emptied for such work, so they are easy and profitable to be run as a business concern.

All SkyPool facilities are adaptable, extremely durable and reliable.

ENGINEERING CALCULATIONS

The structural calculations for SkyPool panels are made to ensure the resistance of our installations and compliance with European and local standards.

We make specific seismic calculations in order to comply with the most rigorous standards and to ensure resistance to potential earthquakes, including in the most susceptible areas of the planet.

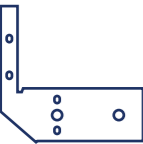

SKYPOOL, MODULAR TECHNOLOGY FOR PREFABRICATED POOLS.

SkyPool's modular technology makes possible the design of the most straightforward to the most complex shapes. The way the panels that form the framework of a pool are put together enables the mechanical stress caused by the water to be countered, whilst the buttresses make the structure stable and the assembly of the pool can be carried out with pinpoint accuracy. SkyPool adheres to seismic building codes thanks to the choice of an unwelded panel framework and its chemical anchor fastenings.

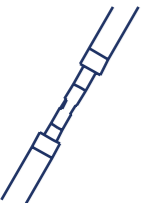

OVERFLOW CHANNEL

Totally modular. Can be made to measure for different grill and tile sizes.

REINFORCED BRACKETS

The brackets deliver greater resistance and stability in the overflow channel and panel area

TENSIONER

The tensioners are adjustable and enable a pool to be assembled down to the last millimeter.

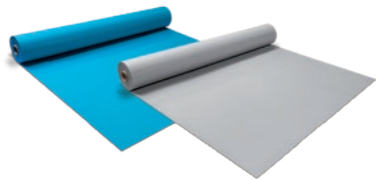

STANDS

System of stands that provide better stability on the ground.

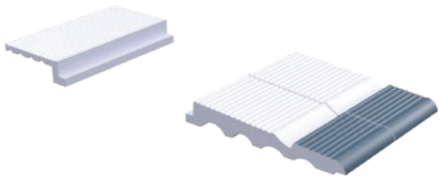

LEVELING

With a chemical anchoring fixture (30mm)

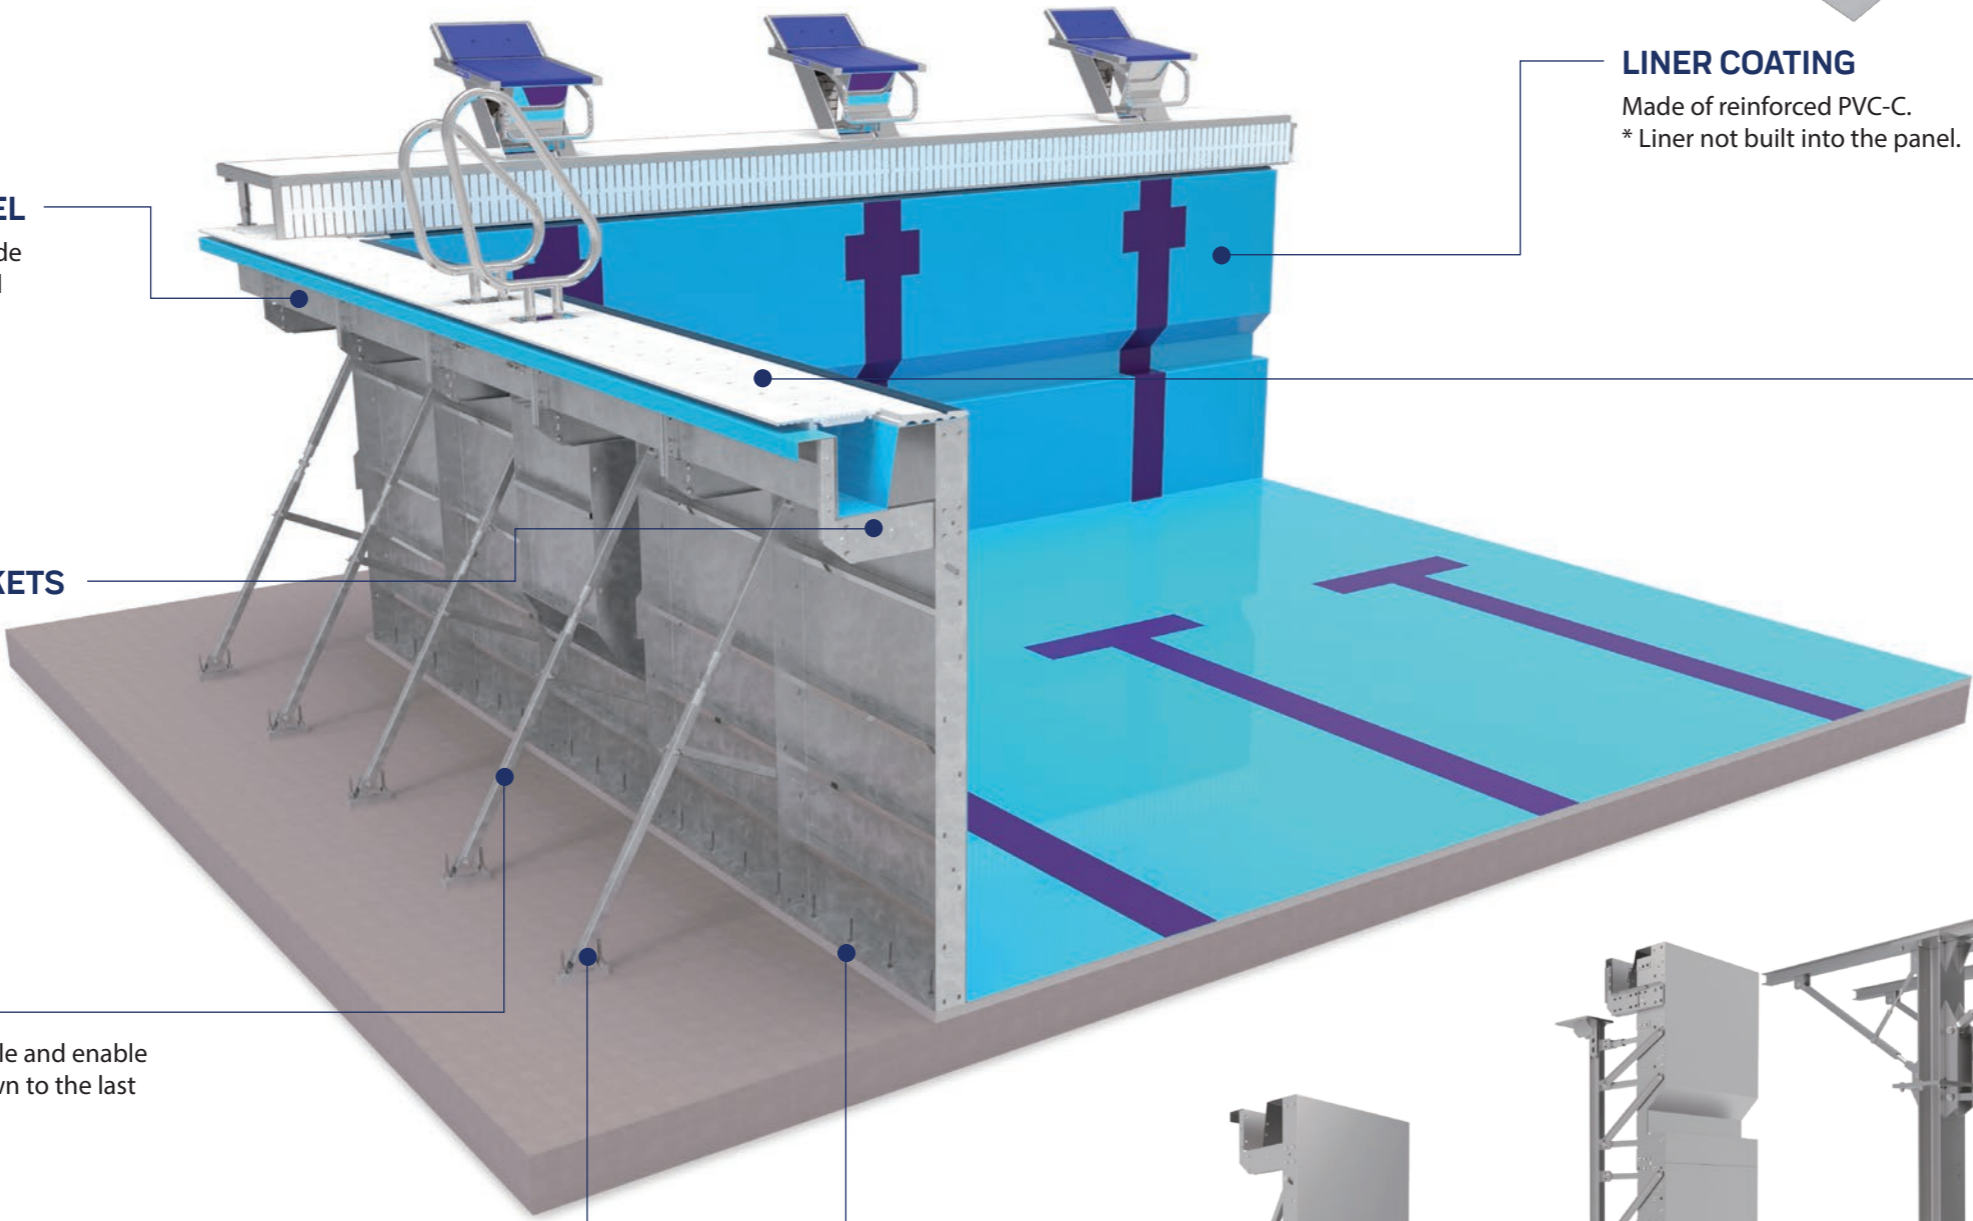

LINER COATING

Made of reinforced PVC-C.
* Liner not built into the panel.

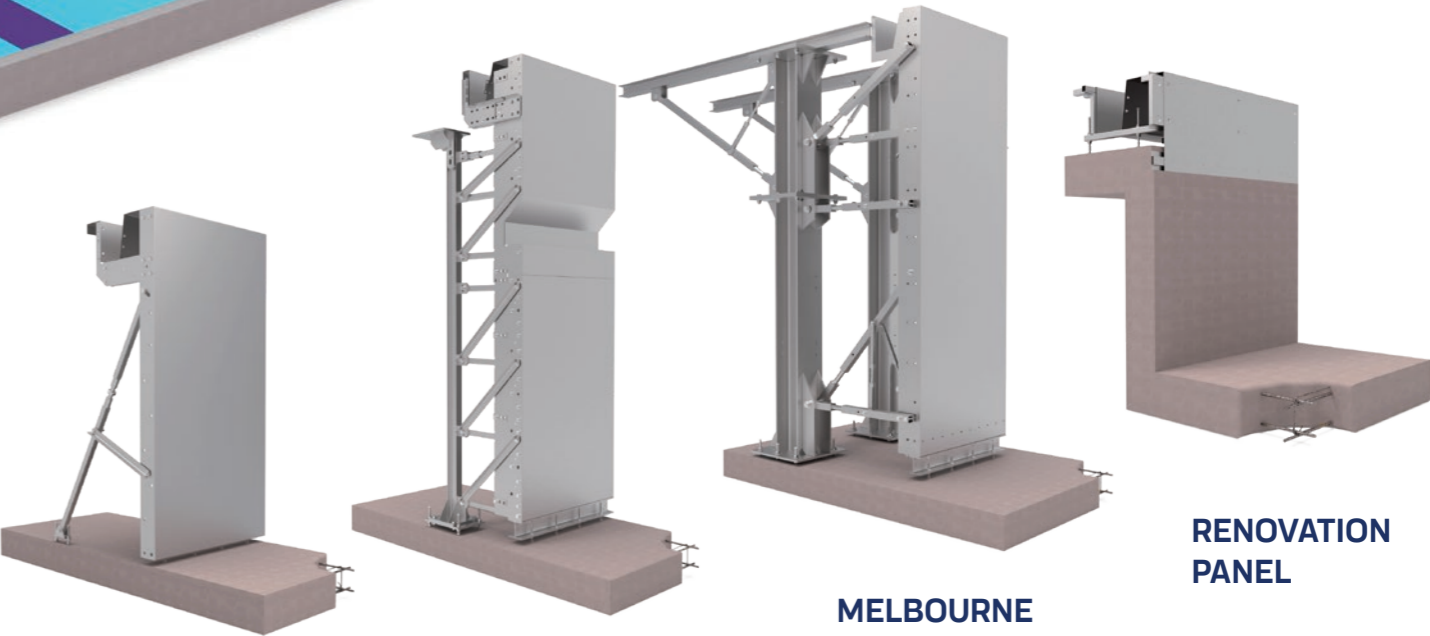

CERAMIC TILES

Range of ceramic tiles to be placed on the overflow channel, with a high quality, non-slip finish.
* Tiles not built into the panel.

BARCELONA PANEL MODEL

Description:
SkyPool's prefabricated pool panel system is patented by Fluidra for the construction of fully customized pools that are suitable for any architectural design.

Its self-supporting system allows it to be anchored to a concrete slab without the need to fasten a pool's outer decking to the slab. This design makes possible the differential absorption of the subsidence of the slab at the base of a pool. The panels can be supplied in hot-dipped galvanized steel and stainless steel.

SkyPool galvanized steel self-supporting panels suitable for pools of up to 2.2 m.

CAR PANEL MODEL

Description:
The range of CAR prefabricated panels are specifically designed for very deep pools in order to comply with all standards on Olympic, semi-Olympic, Paralympic and world championship pools, and pools for water sports such as water polo, diving and synchronized swimming.

They are designed with a strong metal lattice framework anchored both to the concrete slab and to the formwork of a pool's decking.

Self-supporting galvanized steel panel suitable for pools of up to 5 m. Fastenings are required at the top and on the bottom.

MELBOURNE PANEL MODEL

Description:
Melbourne panels are a range of prefabricated panels for event pools, specifically designed for pool depths from 2.5 to 3.5 m. The self-supporting framework is anchored to the base slab and has a structure for building the outer decking. Ideal for building Olympic and synchronized swimming pools.

Temporary events. This type of panel is suitable for use in temporary events. The design of these pools makes it perfectly feasible to add bleachers in a stadium and they have an outer decking.

Galvanized steel panel suitable for pools of up to 3.5 m with structure to install the pool decking.

RENOVATION PANEL MODEL

Description:
Replacement panels are the ideal solution for any old pools that have to be renovated to adapt to current standards and to give them a new lease of life.

Quick and easy to fit without the need to demolish the whole of a pool. Using galvanized steel replacement panels, only the pool's coping has to be demolished and a new overflow channel installed. Ceramic and non-ceramic finishes are available, and they have built-in drainage outlets. The most inexpensive solution to give your pool a new lease of life.

Galvanized steel SkyPool panel suitable for renovating any existing pool.

SPECIFIC PANEL MODELS

STEP PANELS

Description:
Panels with built-in ladders that comply with FINA standards. Supplied with split ladder, fastenings and asymmetric handrails to make it easy for swimmers to get in and out of a pool.

SWIMMER
FOOTHOLD PANEL

Description:
Built-in foothold at a depth of 1.2 m for swimmers to rest.

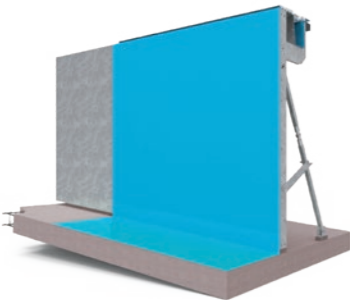

GLASS SIGHT PANEL

Description:
Glass windows so that trainers and physiotherapists at high performance and rehabilitation centers are able to observe swimmers underwater.

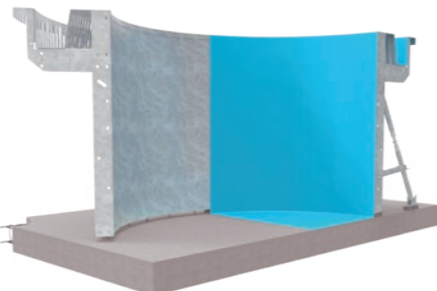

EGARA

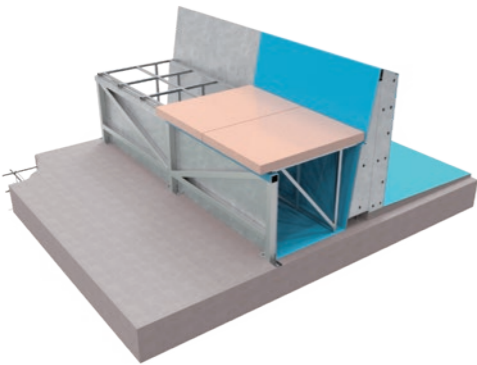

INCLINED PANELS

Description:
Inclined panels can be supplied to the specifications of an architectural project.

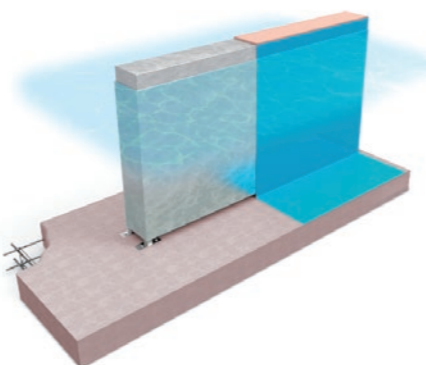

CURVED PANELS

Description:
Round and semicircular panels. They can be used to build free-form walls. Ideal for wellness centers and leisure areas.

INFINITY / COMPENSATION
TANK PANEL

Description:
Infinity effect thanks to the specific design of the overflow channel. It is possible to use designs in which the overflow channel doubles as a compensation tank.

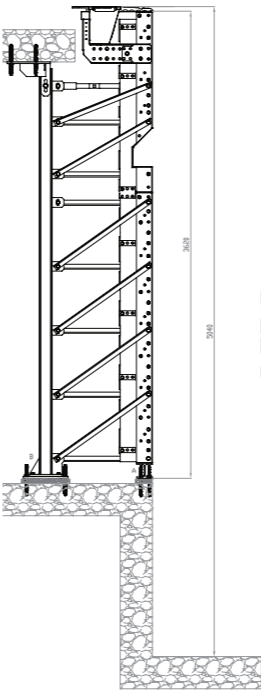

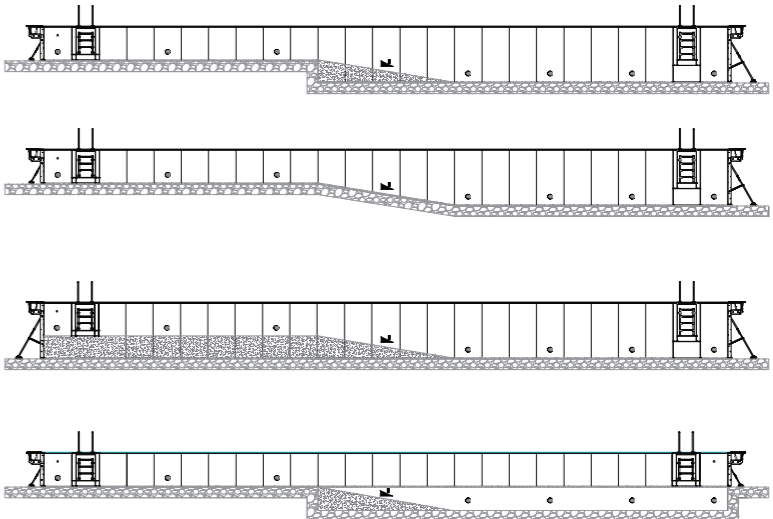

INTERIOR WALLS

Description:
Dividing walls for areas around ladders, ramps for the disabled, and for separating leisure areas and spa zones.

SKYPOOL CONSTRUCTION APPLICATIONS

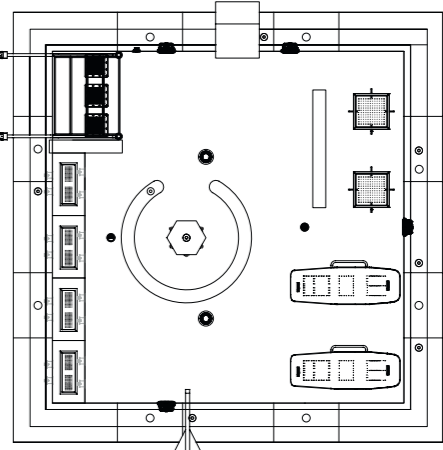

ARCHITECTURAL
SOLUTIONS

There are numerous building options using SkyPool panels for any given project. There is always a solution that adapts to your construction requirements. Consult our Technical Dept. to find the most suitable solution for your circumstances.

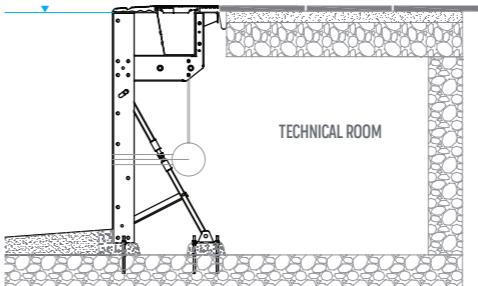

DIVING POOLS

It is possible to combine the use of SkyPool panels and concrete walls to attain the great heights required in diving pools, whilst making savings on the cost of building work.

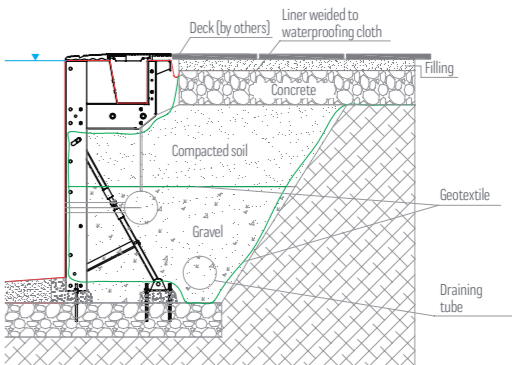

WELLNESS AREAS

The combination of curved-shaped panels is ideal for wellness areas. Interior walls, benches, etc.

TECHNICAL PANEL ROOM

The panel can be accessed from the back. Easy maintenance and inspection

IN-GROUND

SkyPool panels can be used for in-ground pools as long as allowances are made for land drainage

POOL WATERPROOFING USING A REINFORCED PVC-P LINER

The liner made of 150/100 reinforced PVC-P (plasticized polyvinyl chloride) is the most commonly used system for covering liner pools as it is extremely flexible, resistant to tearing, easy to weld, resistant to bleaching from UV rays and because it comes in a wide range of colors. Renolit Alkorplan® reinforced membranes are 100% watertight and 100% recyclable.

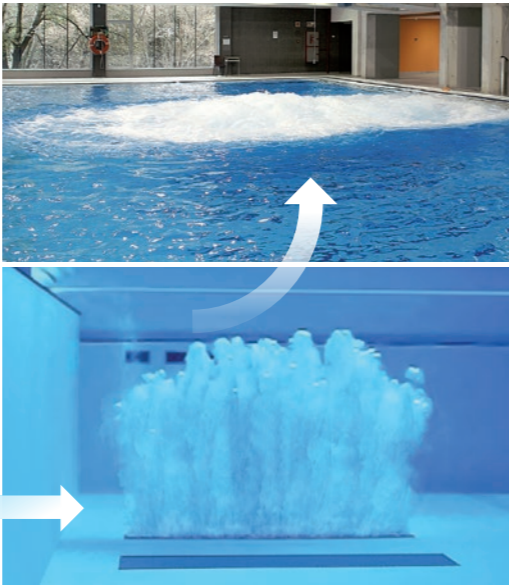

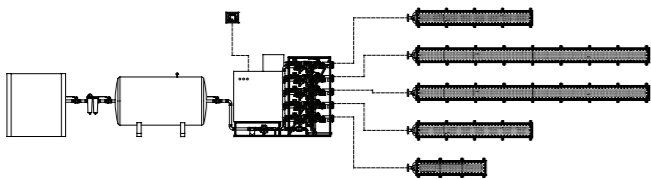

SPARGER SYSTEM

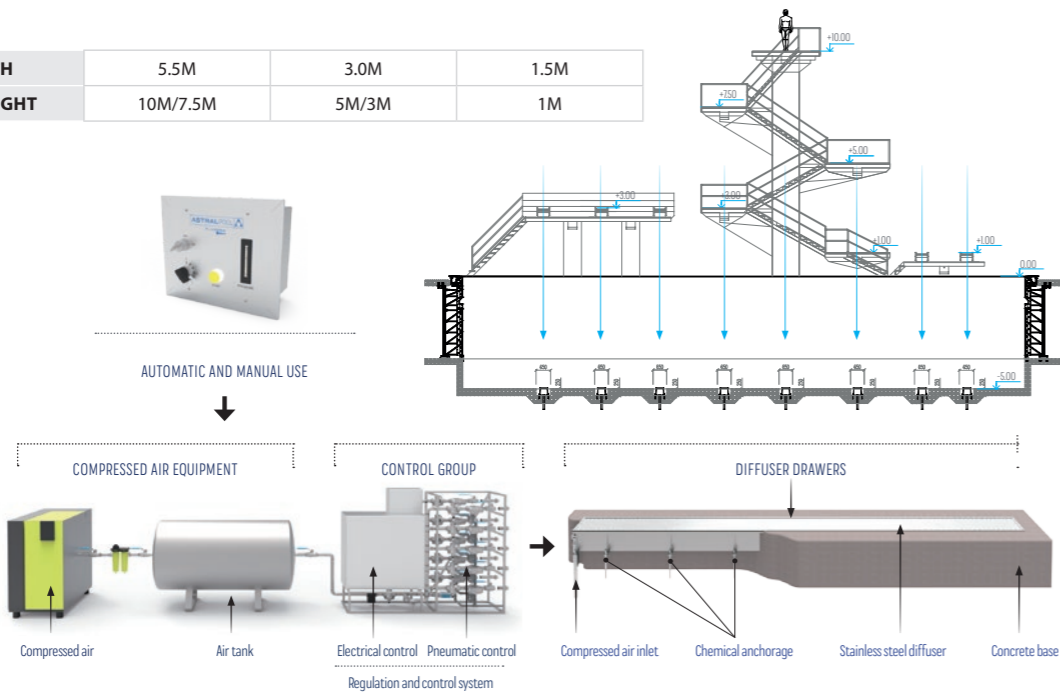

SAFETY IN DIVING

When diving off a diving board, the undisturbed water forms a fairly resistant surface, which if combined with a bad descent can result in serious injury on impact.

AstralPool has added Sparger technology to its pools, in the shape of a new safety system for diving pools. Air is released at high pressure from the pool floor, which forms a large amount of bubbles when it mixes with the water to form a cushion for divers. This reduces the risk of injury and divers are more confident when they dive into the water, whether they are beginners or athletes.

LENGTH	5.5M	3.0M	1.5M
JUMP HEIGHT	10M/7.5M	5M/3M	1M

MOVABLE WALL - MANUAL OR AUTOMATIC

Multipurpose pools

By using a movable wall, a pool can be turned into a multipurpose facility that adapts to different public uses and can be divided into work areas.

This enables facilities to be more financially profitable as they can make the most of their capacity by running various activities at the same time in a single pool.

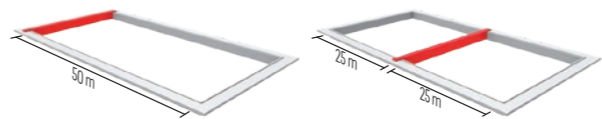

Movable wall: versatility

A movable wall or bulkhead is a vertical underwater structure able to move lengthwise across a pool floor to form a physical barrier.

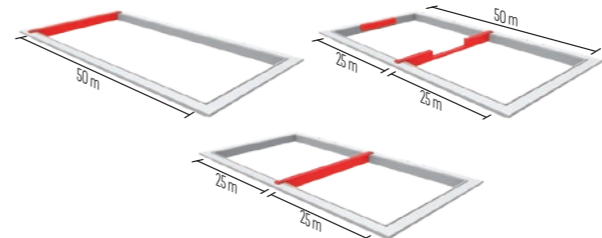

This system makes it possible to make the most of the space in a pool as it divides it into areas for different uses. This therefore makes better use of space and gives swimmers a greater variety of options for a lower overall cost.

The framework of a movable wall is made of stainless steel and ABS slats, and it rests on rails fitted on adjacent decking. It moves by means of two mechanical flywheels that may be automated as an added extra.

MOVABLE WALL - MANUAL OR AUTOMATIC

A single pool for a whole host of activities.

The installation of AstralPool's movable pool floor makes it possible to use a single swimming pool to stage several activities at the same time that require various depths of water, such as competitions, synchronized swimming, leisure activities, rehabilitation exercises and water aerobics.

The system is based on a mobile platform submerged in the water that changes the height of the pool shell, which enables a number of areas of varying depths to be created according to needs. In addition, the movable pool floor can be used to partially or totally cover a pool, which means greater energy savings and safety.

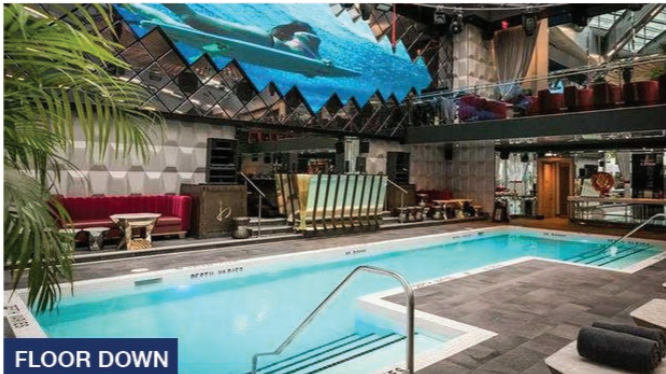

FLUIDRA POOL PROGRAMMING

MOVEABLE FLOORS

Description:
Our Akvo moveable floor solutions are made of a rigid 316L stainless steel, self-supporting floor driven by lifting columns called Spiralift. Innovative and hassle-free, this technology is very robust and can stand up to wear, chlorine and heavy—even very heavy!—loads. The high load capacity of our moveable floors meets the international standard of 65 kg/m2, which can be easily increased with additional lifting columns. An adjustable system that meets your every need—that's the real value of made-to-measure.

SWIMWALL SYSTEMS

Description:
SwimWall Systems™ provide unprecedented swimming pool flexibility and thus more revenue opportunities. SwimWalls are positioned on the pool floor when not in use. By filling the wall with air, it moves into a vertical position, forming a pool wall that is designed to fit around lane lines. This system effectively doubles the number of lanes, or offers the flexibility to have some swim lanes 50 metres in length, and others 25 metres.

MOVEABLE BULKHEADS

Description:
The S.R.Smith Bulkhead offers swimming pool flexibility by separating a commercial pool into a variety of separate spaces for various aquatic programs and is used for FINA sanctioned short or long course swimming competitions. The Bulkhead can also be used to define water polo fields and allow officials a walking bridge along the playing field. For day-to-day operation, a Bulkhead provides separate areas for a wide variety of competitive and recreational aquatic activities.

ENDWALLS

Description:
Endwalls are designed to provide a safe and efficient means of managing competition and fitness swimming in an overflow or 'wet deck' pool environment. Our advanced and innovative Pultruded FRP EndWall is chemical and UV resistant in even the most demanding facility environments. Precision engineering and production ensure that FINA tolerances are maintained.

DIVIDING WALL

Description:
The unique SR Smith static wall allows for pools to be reconfigured in a semi permanent way, allowing for a rigid, trafficable structure to divide one body of water into multiple pools.

- Corrosion proof composite and engineered polymer construction
- Non-slip walkway for coaches and teachers
- Flow through micromesh grating - allows for complete circulation through both bodies of water
- Shallow anchoring method prevents damage to pool floor and structure
- Fast Installation - within 3 days
- Australian made
